The four big ideas of Transactive Energy (TE):

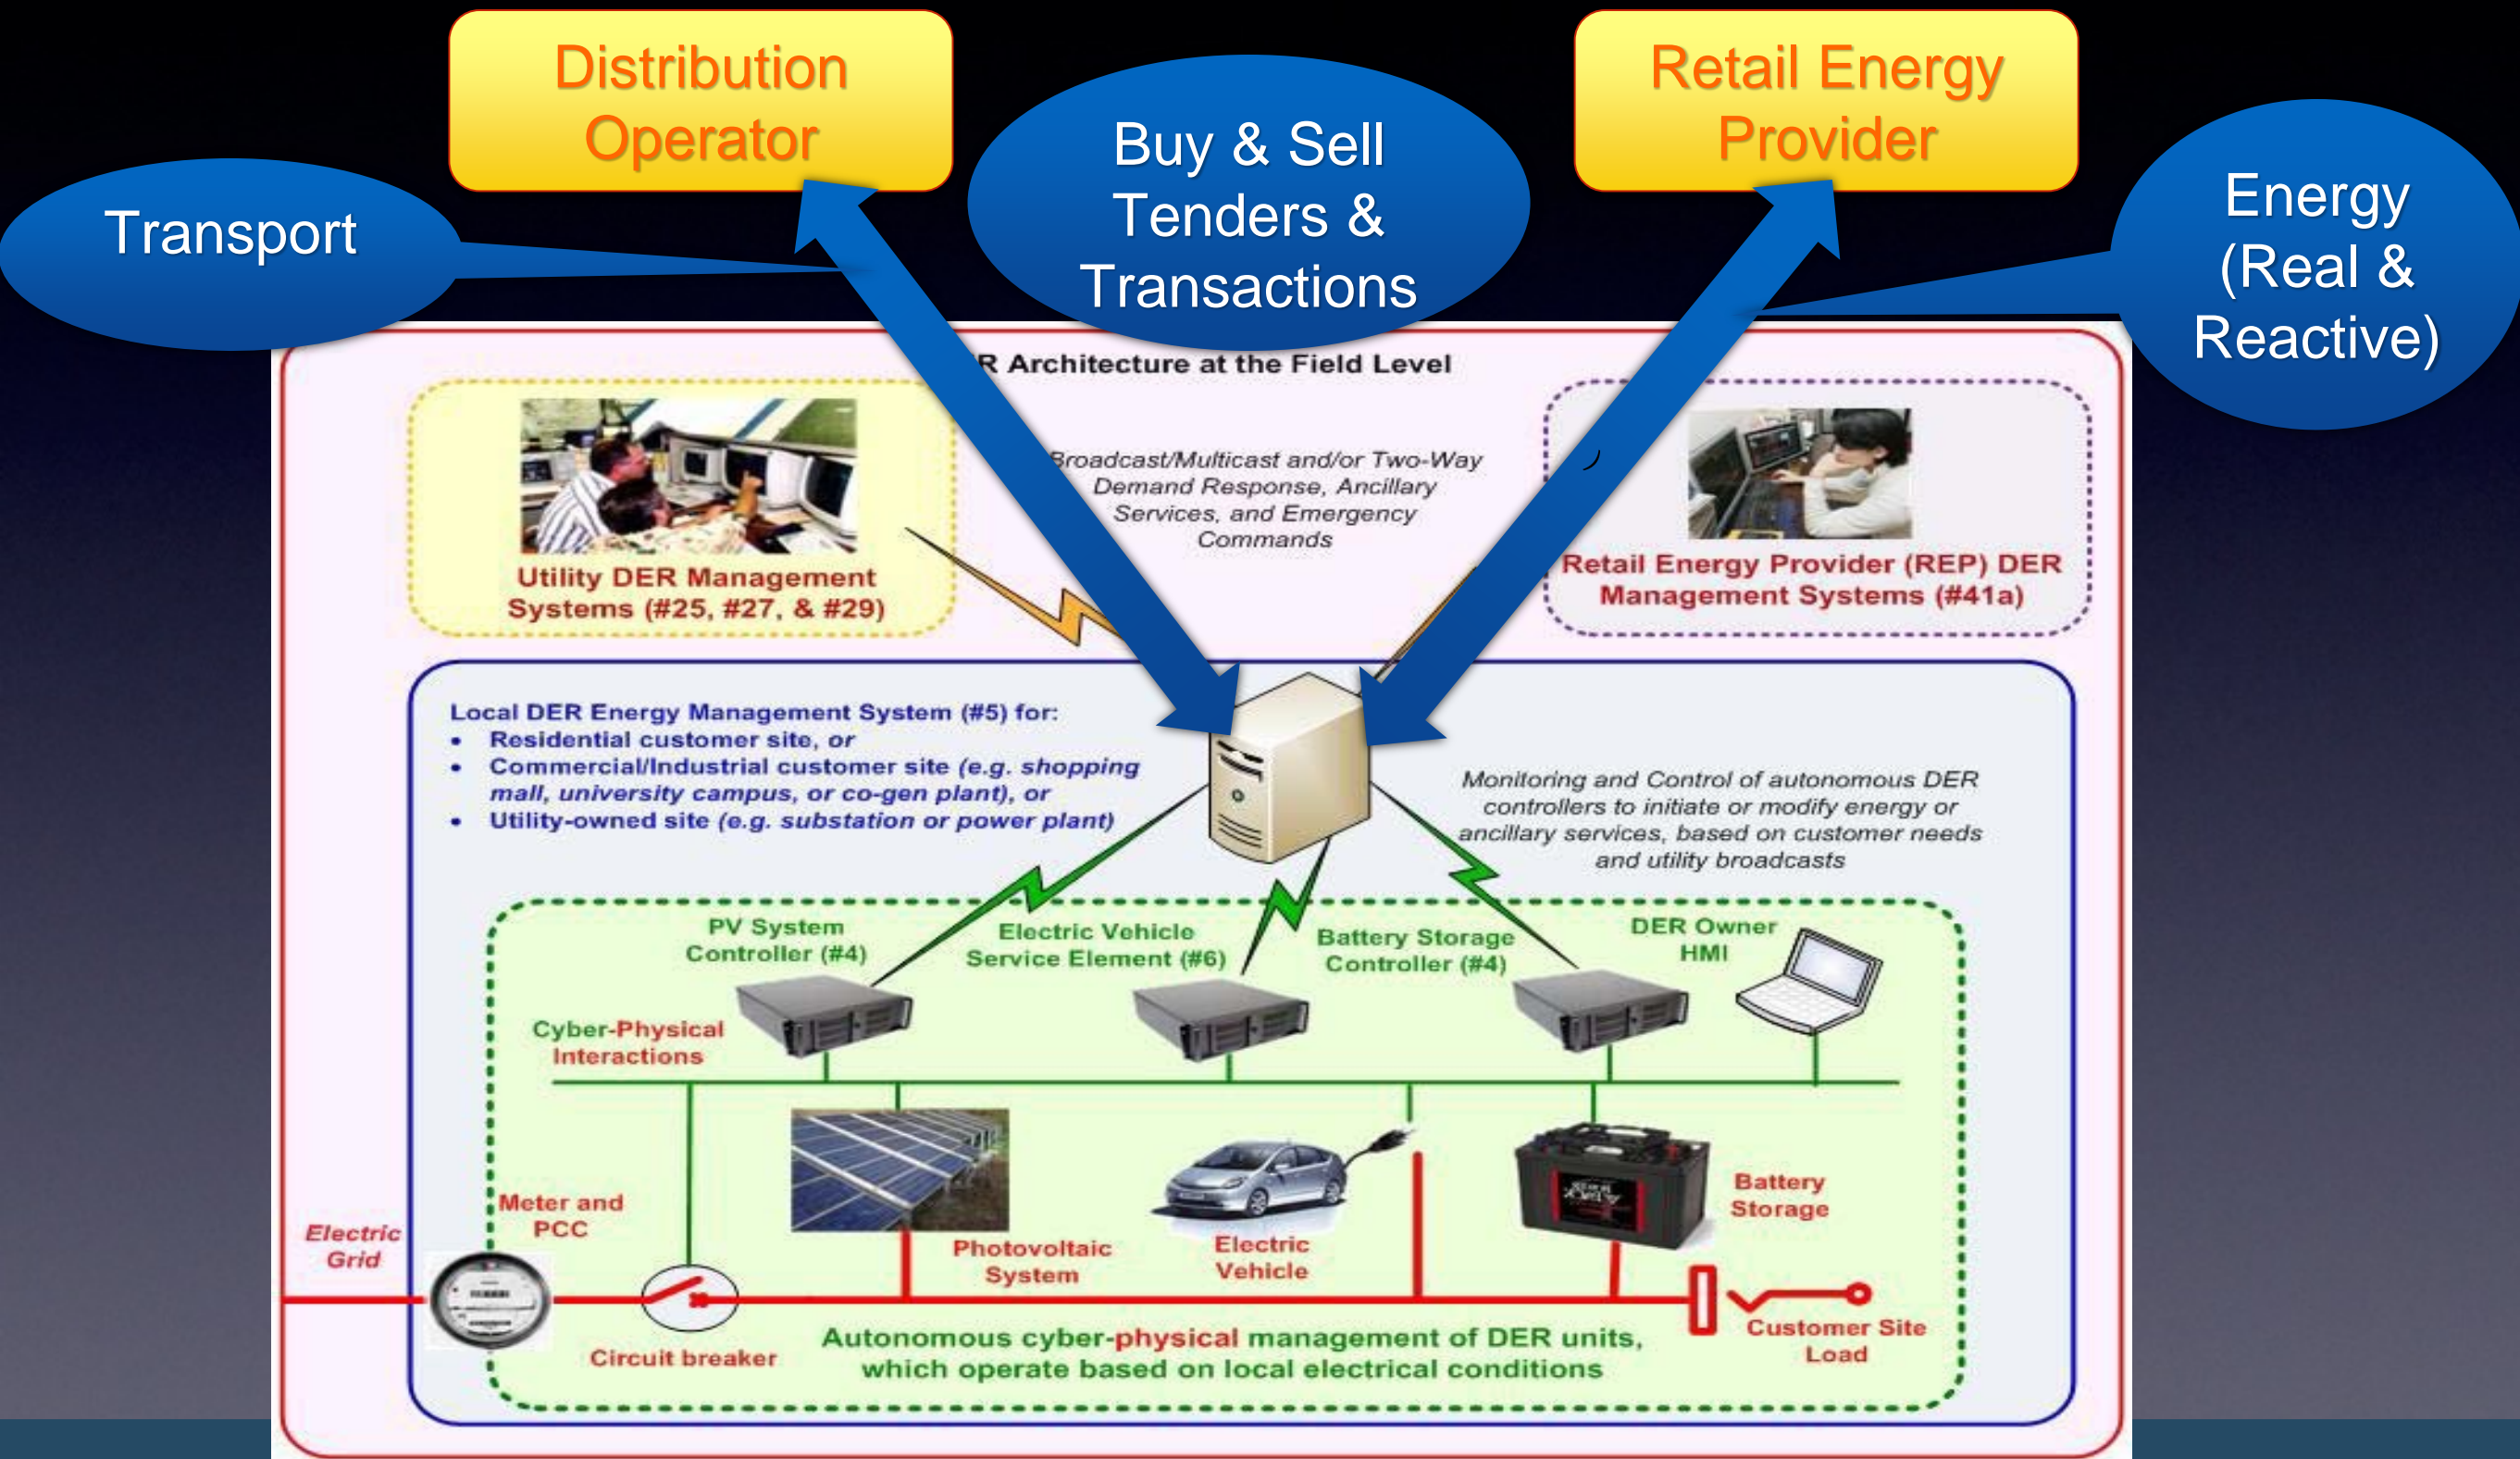

Forward transactions are used to coordinate investments and manage risk.

Spot transactions are used to coordinate operating decisions.

All parties act autonomously.

There are two products: energy and transport.

Transactive Energy Interfaces for DER

TeMix/OASIS Information Model and API

www.oasis-open.org/committees/tc_home.php?wg_abbrev=energyinterop

Transactive State:

Product Type:
Energy, Transport

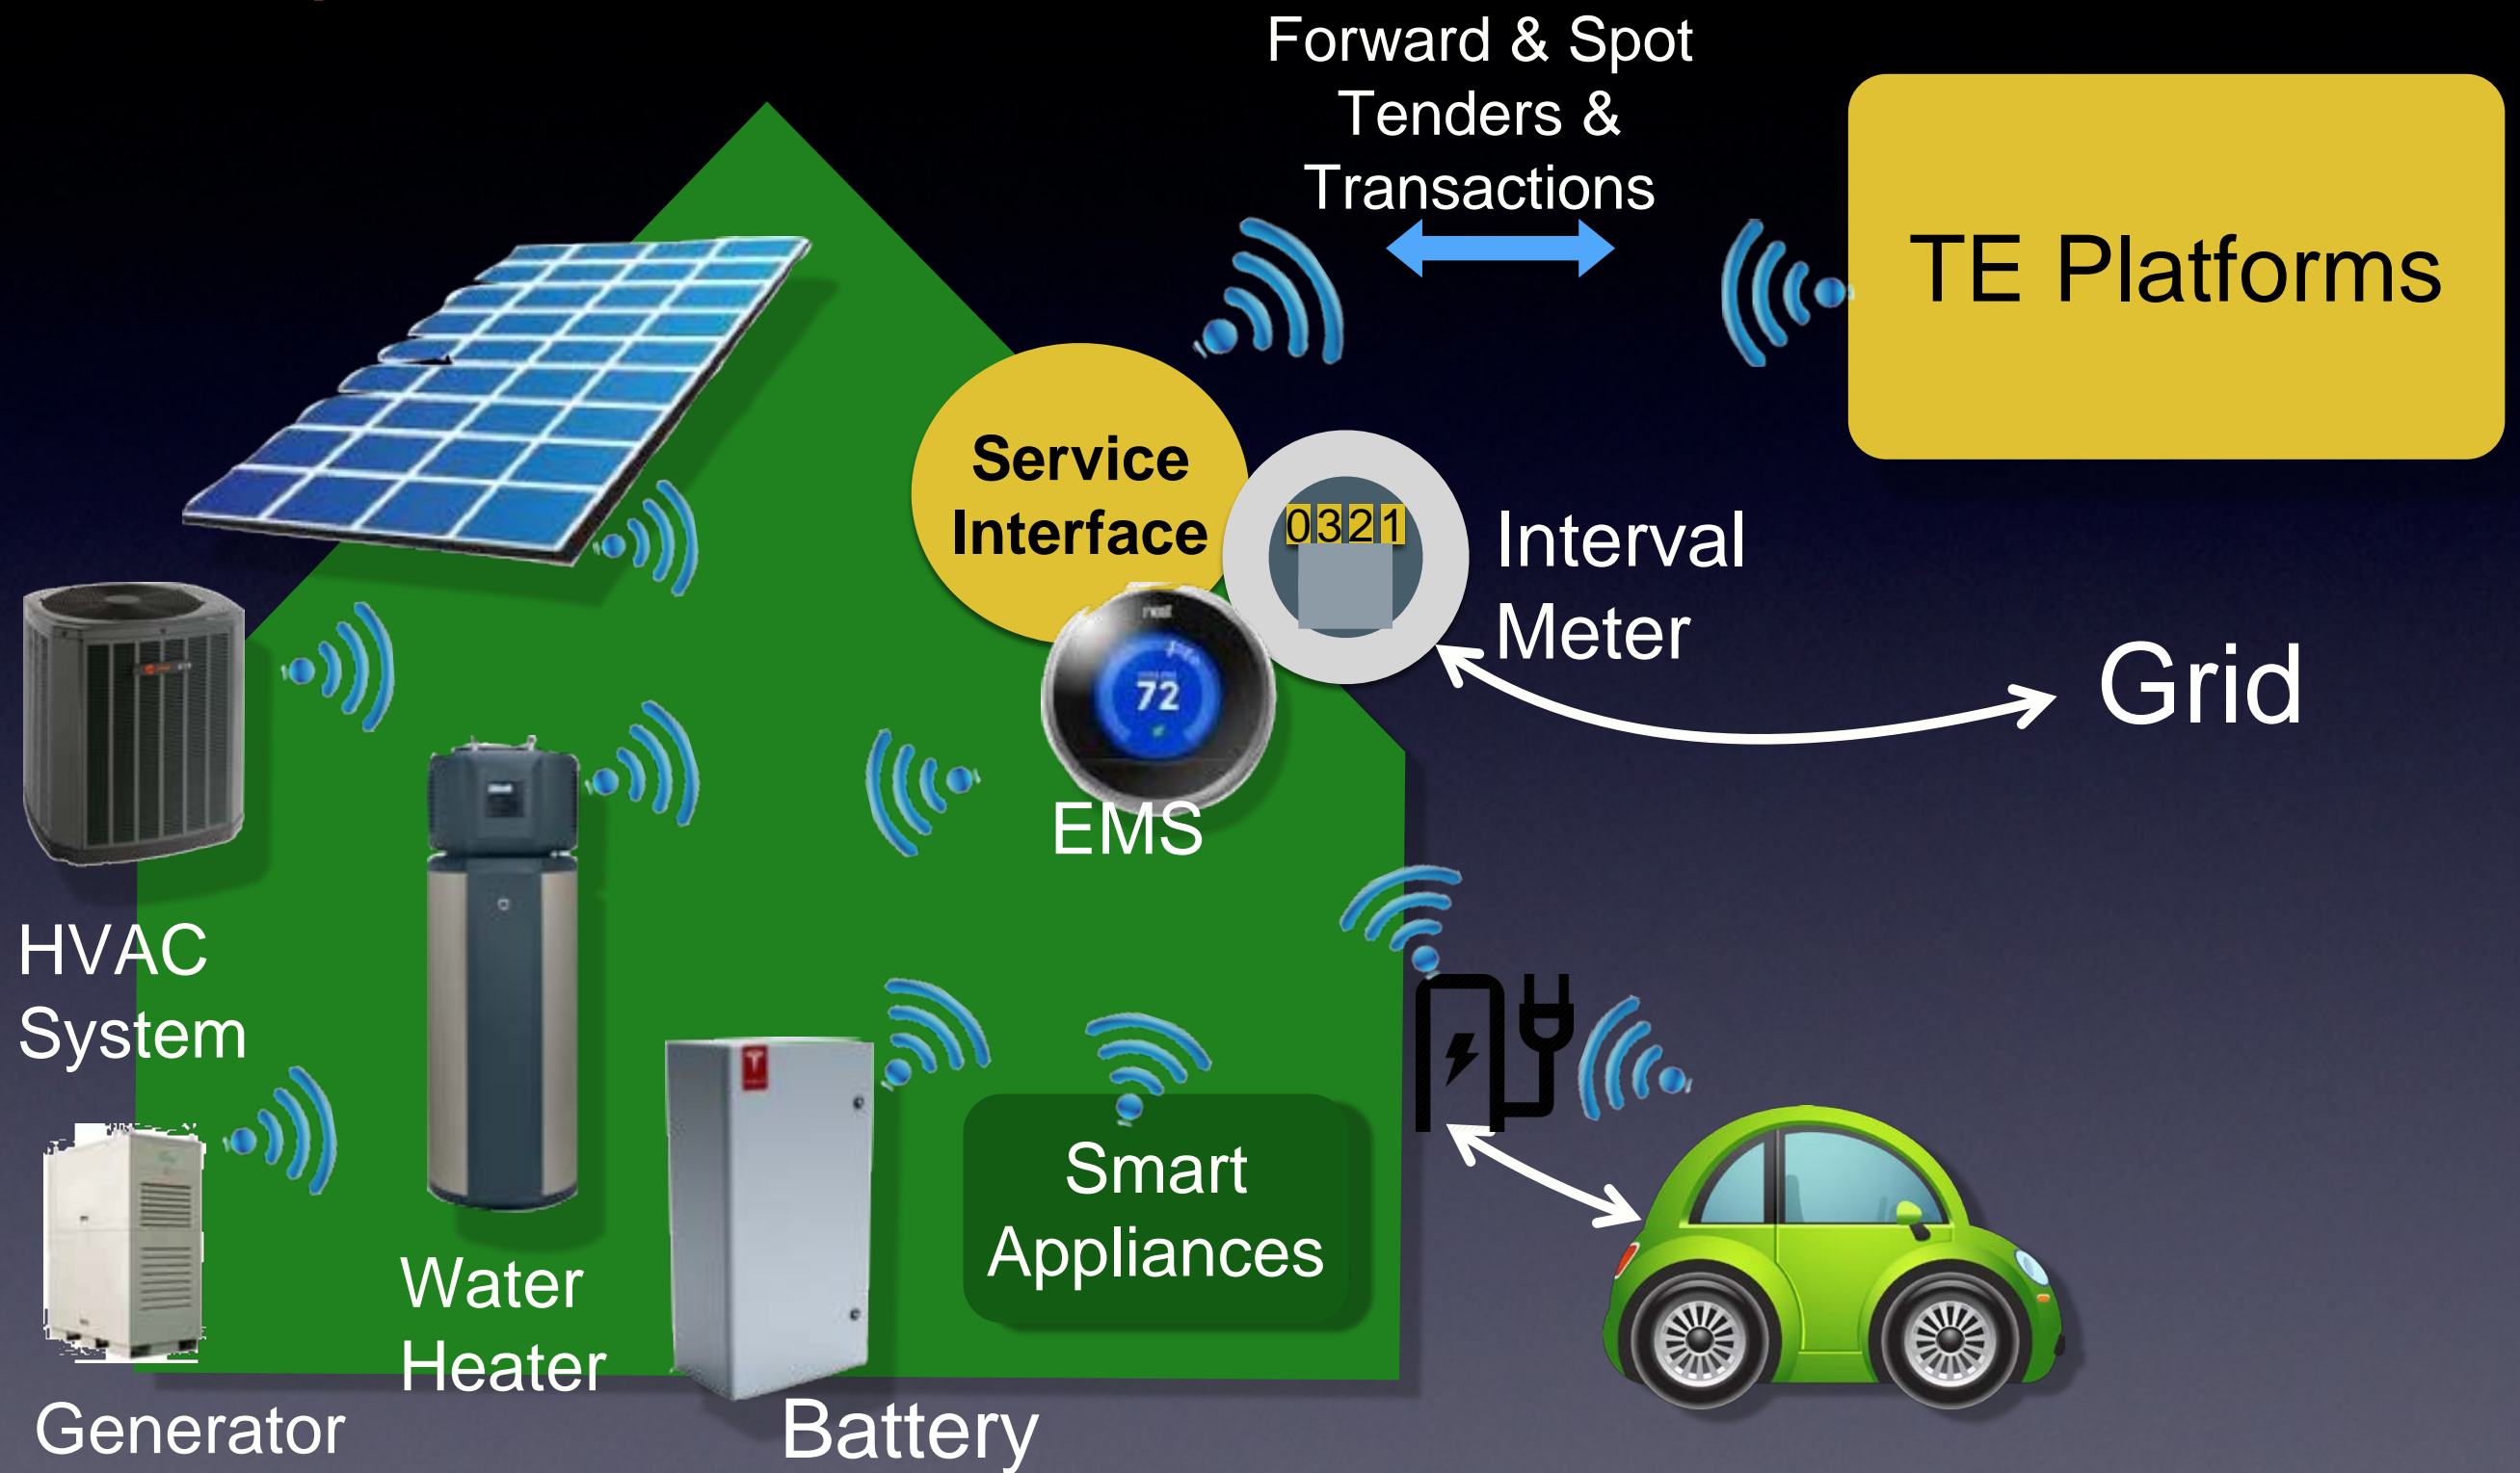

Subscription
Type: Fixed, Call,
Put

WS-API:
Create,
Request

Attributes: Market, Agreement, Transactive State,
Product Type, Subscription Type, Real/Reactive,
Interface(location),

Start Time, Duration, Side, Quantity, Price,
Expires(tender)

People automatically manage facilities and devices in response to Tenders from TE Platforms.

A two-way Transport product delivers the Energy product.

Electric energy
(at a place and
time)

Example:
Transmission
Connected
Substation

Transport

Example:
Two-way
Feeder

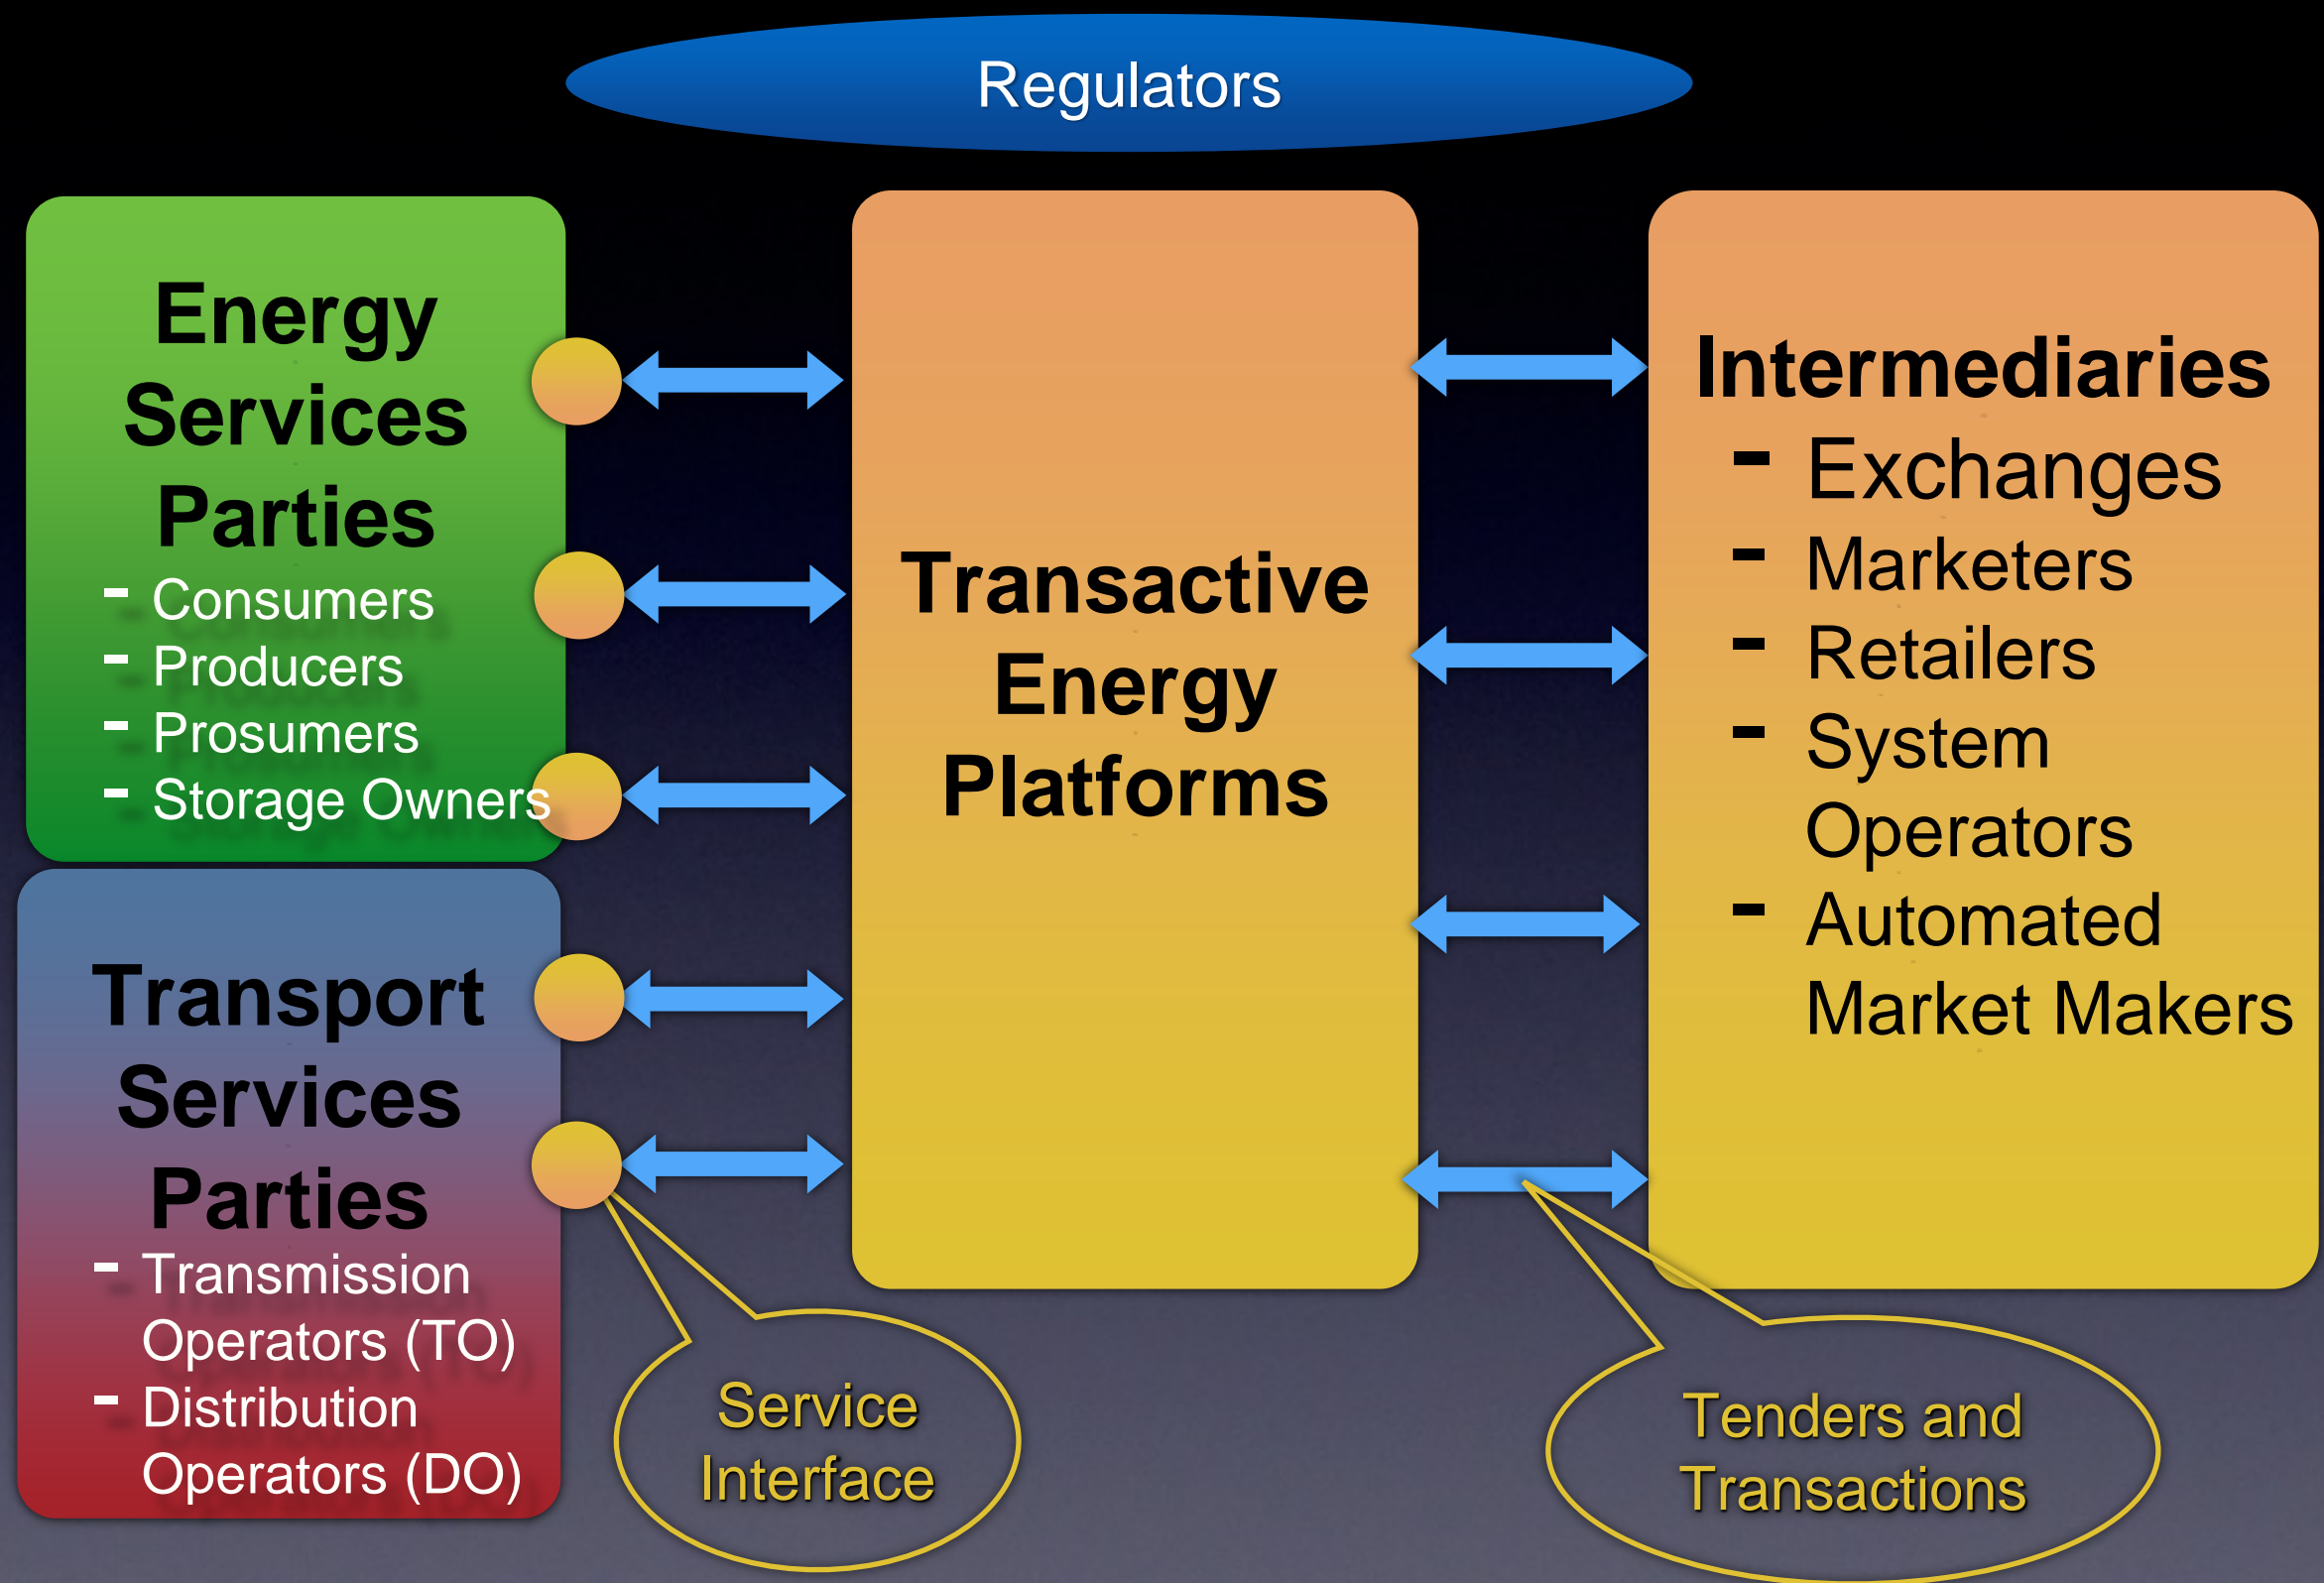

Electric energy
(at a different place
and same time)

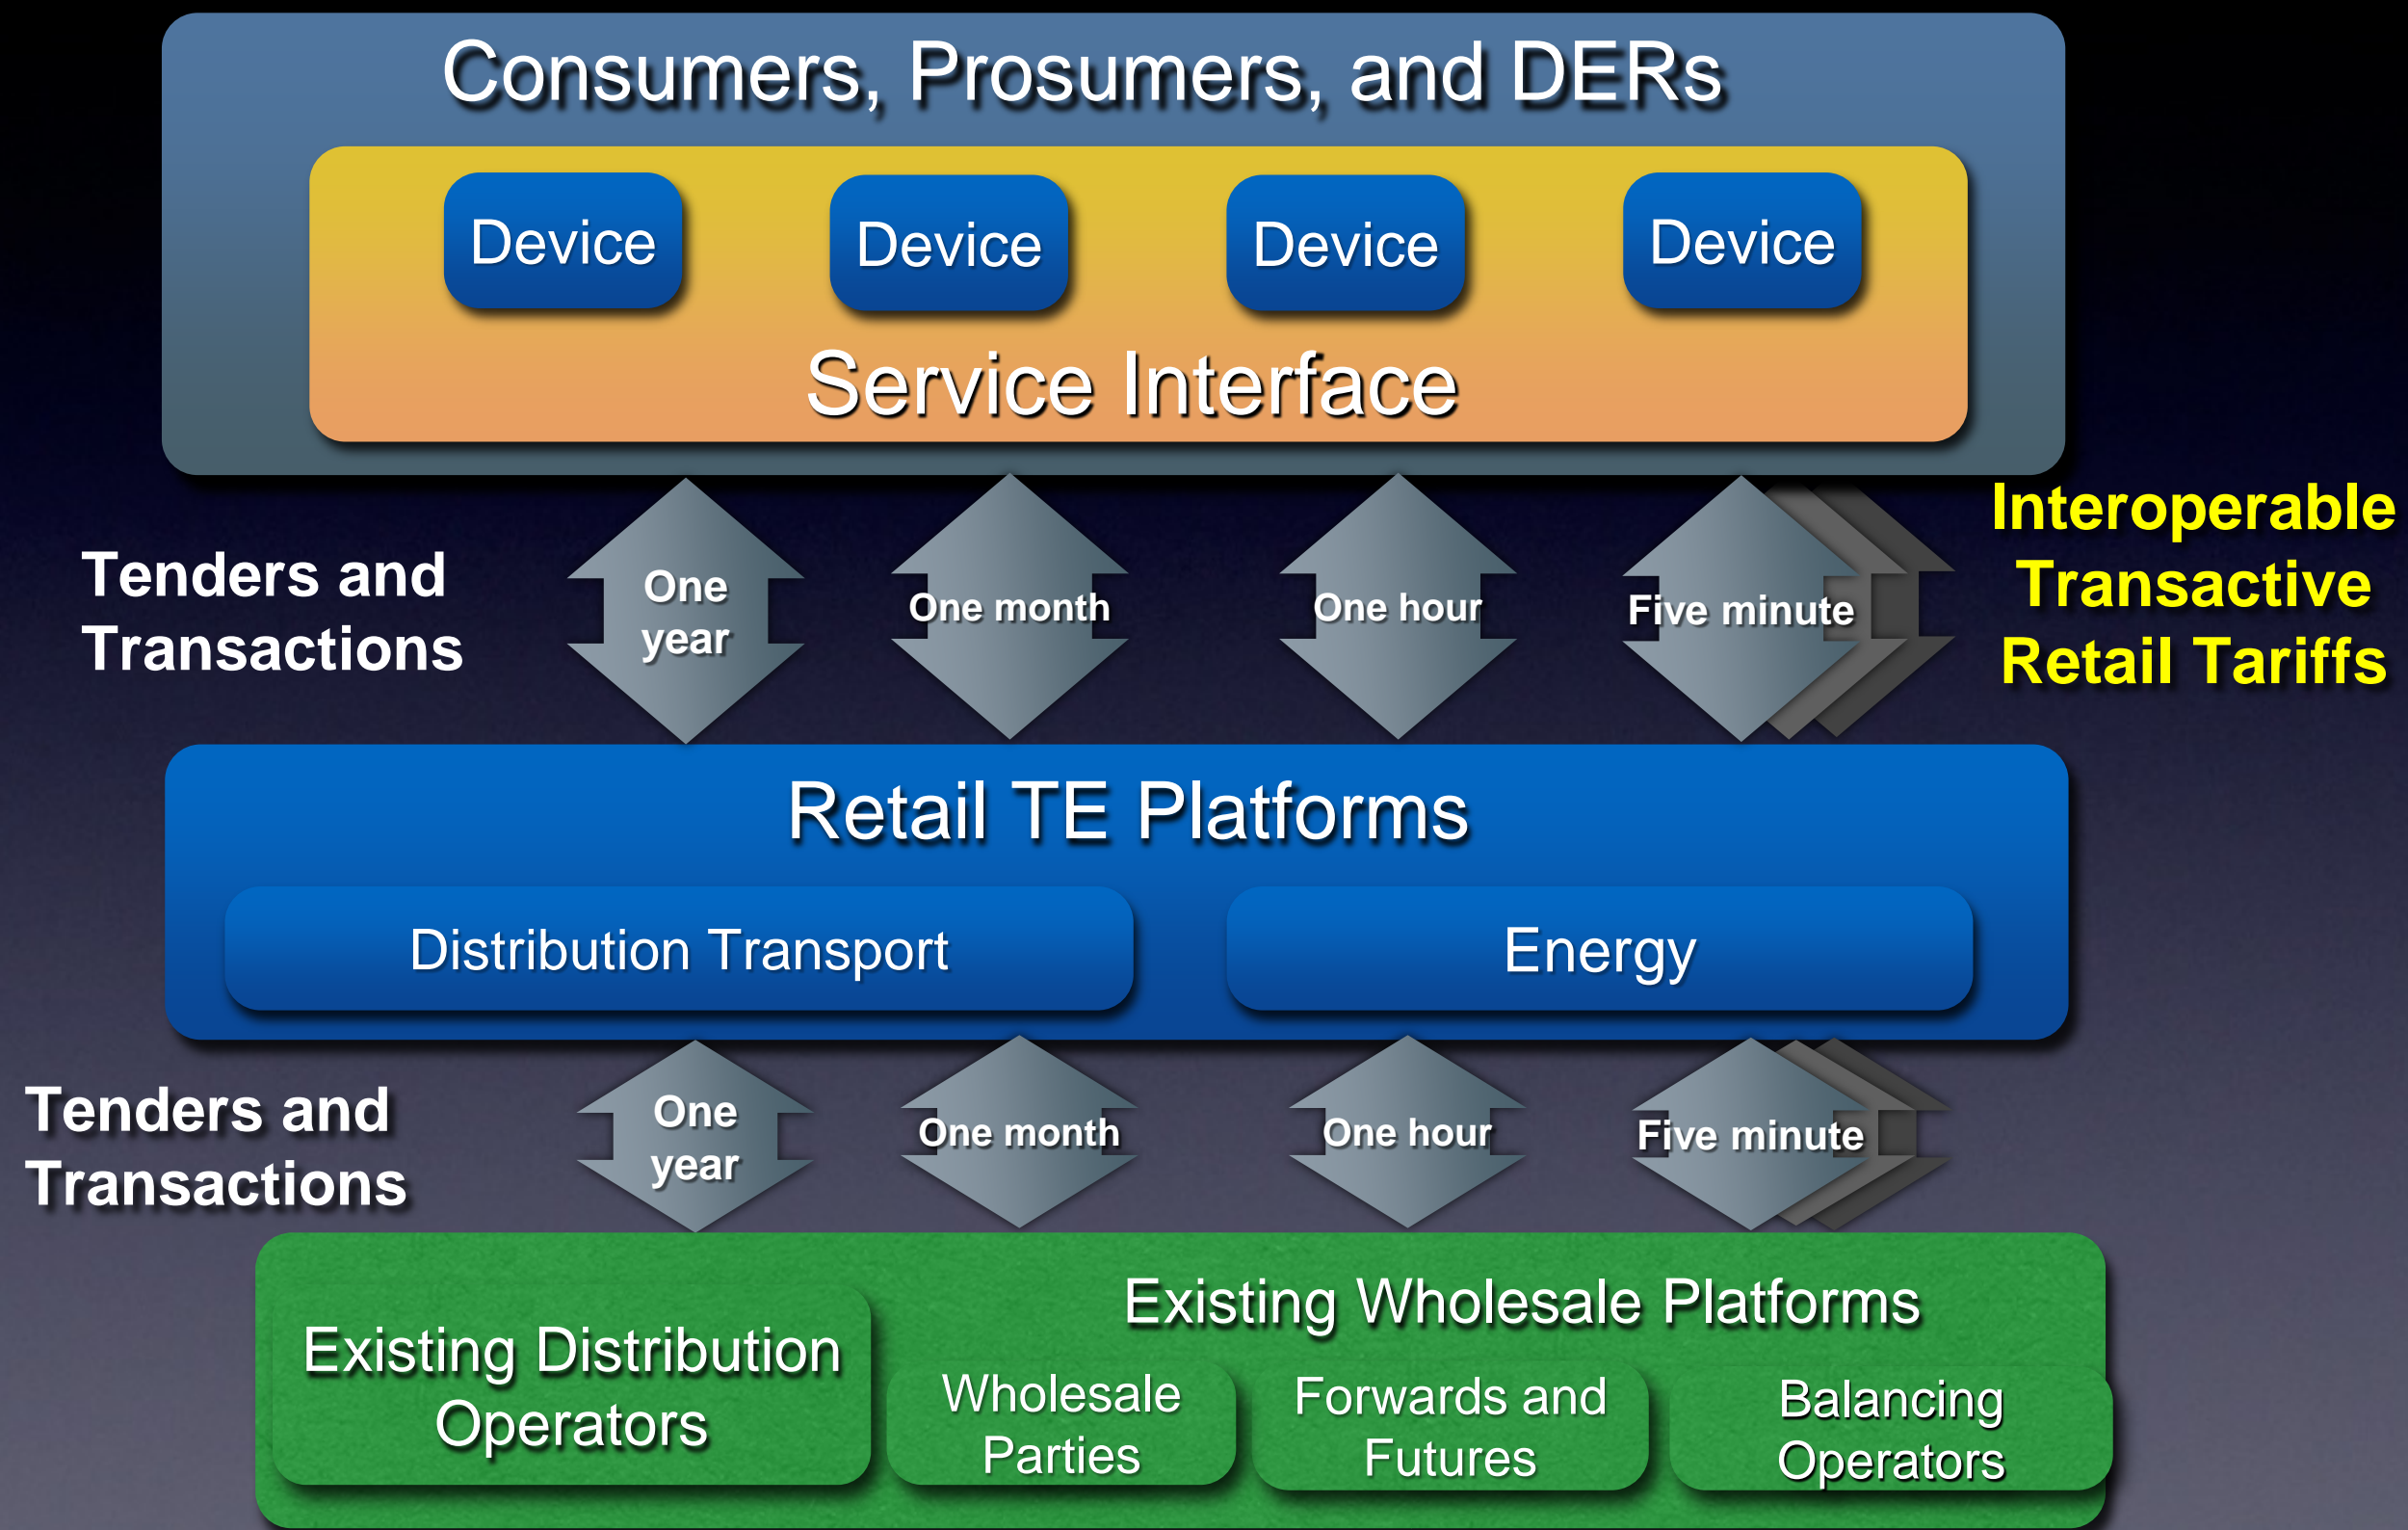

Example: Building

Transactive Tariff: Recover more of the cost-of-service when transport is heavily loaded in either direction

Vision: The “grid of people” who manage the “grid of things”

Retail platforms and tariffs work with current wholesale platforms and distribution operators.
